In this study, second and third Grade students who scored at or below the 10th percentile on a fall reading screener received a targeted Tier 2 reading intervention for 20 mins, four times per week, for up to 18 weeks.

Their growth was compared to (a) students in Tier 1 without reading deficits and (b) students receiving special education services who scored below the 10th percentile and received a business as usual interventions per their IEPs, but not the targeted Tier 2 intervention.

Students who received the targeted Tier 2 intervention grew at a rate that equaled that of students without deficits in Tier 1 and was significantly higher than students who were receiving special education services. The findings underscore the importance of small group reading interventions, including for students with the lowest reading skills.

Growth Rates for the Three Groups

Adapted from Figure 1

- Tier 1
- Tier 2
- Special Education
